Stephen E. Raines  
Executive Director  
Texas Low Level Radioactive Waste Disposal Compact Commission

**Re: 2024-2025 Import Agreement – H3 Amendment Request**

Dear Stephen,

Bionomics has a client with a large amount of old H-3 Sources that we will be sending to WCS for disposal. When we put together our Import agreement for this year, we included a little over 5,000 curies of H3. This effort for disposal of H3 has grown and we now have almost 7,000 curies of H3, for which we have approval from WCS for burial pending an Import Agreement.

Every year we estimate in advance our needs for the following year and typically use up most all of the activity and volume requested. We don't speculate on our needs and this upcoming year is no different.

We need to amend our 2024-2025 Import Agreement to include a total of 7,100 curies. This is an additional 1,100 curies to our current application of 6,000 curies.

Please let me know if you can accommodate this request and if there is anything we need to provide.

Sincerely,

John McCormick  
Vice President  
Bionomics, Inc.
